INTRODUCTION

Accknowledge Systems develops, maintains and supplies **Webaccounting accounting software and Webatar mobile application.**

The entire product range is **developed locally in South Africa**. Development began in 2002 with a comprehensive resource of developers. The package was officially released to market at the beginning of 2005 when it was immediately accepted in the market and is currently growing from strength to strength.

Our original mission statement was to create a **stable**, **secure**, **unrestrictive and expandable** software accounting package which was easy to use whilst being capable of handling complex accounting rules.

Key to the success of Webaccounting is that the software has always incorporated both online, hosted (in the cloud) and individual company intranet installation options. Furthermore, it has successfully endured the rigours of many audits of various companies.

The company wanted software that could be accessed from anywhere in the world without having to have software loaded onto a client's machine. By not having installation software on the client machine and everything controlled on the server, there are no problems with changes in client operating systems as the system just requires the Internet Explorer (**IE**) browser which comes as a default on the systems installed.

PRODUCTS AND SERVICES

Accknowledge Systems offers a range of products and services:

Primary products
- Web Accounting software
- Webatar Mobile Integrated Business App
- Point of Sale software
- Asset management software

Services
- Development Projects
- Management Consulting
- Accounting and Bookkeeping services

Historical Service Offering
- IT - Hardware sales and support

- Firewall and Mail Server implementations
- Office 365 implementation and maintenance

SOFTWARE APPLICATION PARTNER

We understand the importance of selecting the correct database on which to build an accounting software system and after considerable research into various database offerings we opted for an international company called **InterSystems** www.intersystems.com

InterSystems own and develop a high-end database product called *Caché*. The partnership between Accknowledge and **InterSystems** has been maintained for over a decade and we enjoy 24/7 support from various InterSystems' global offices located in the USA, the UK and across Europe.

Not only have the support services been excellent but the product is exceptional in that it is *stable, scalable and capable of holding millions of data records*. With the database foundation provided by **InterSystems**, Accknowledge has been able to create a super, feature rich accounting software product.
