

**CONTACT LENSES  
PROFESSIONAL MANUFACTURER**

SINO KOREAN JOINT VENTURE

**ABOUT US**

Shenzhen Dashicheng Optical Technology Co., Ltd. is a medical device company focusing on the research and development and production of colored contact lenses. The company was jointly established by senior professionals in the cosmetic contact lens industry from China and South Korea, and has been deeply involved in the colored contact lens industry for more than 30 years. It has the world's leading third-generation fully molded colored contact lens production technology, and has long maintained in-depth cooperation with internationally renowned brands.

To achieve higher quality and meet different needs of partners, DSC continues innovative technology and design to upgrade the lenses. DSC also provides customized OEM service to meet the needs of partners from lens design, brand building, material packaging, certificate application, etc.

**FACTORY STRENGTH**

**FACTORY STRENGTH**

**TOP 10 BRAND OEM**

OEM production and pattern design for top global contact lens brands

**FACTORY UPGRADE**

Realized in december 2024 monthly production reaches 5 million pieces

**FOUR FACTORIES OF THE GROUP**

Monthly production of 15 million pieces fully ensuring stable supply chain supply

DASHICHENG GROUP HAS THE MOST COMPLETE CERTIFICATES AND LICENSES IN ALL SALES AREAS

HAVING THE MOST ADVANCED  
THIRD-GENERATION FULL MOLDING  
PROCESS IN CHINA

Adopting the most advanced third-generation full molding process from South Korea

Dashicheng adopts the most advanced segmented Korean full mold production method, introduces Korean automation equipment and undertakes transformation and upgrading to further improve production efficiency

Full mold pressing production process ensures fast response in multiple colors and small batches

The technology level of self-produced raw material molds is globally leading

The quality of the mold is the most core factor affecting the quality of the lens. Currently, the majority of domestic manufacturers' molds are substandard, and Dashicheng molds are produced in DUEBA, South Korea to ensure mold quality and delivery cycle

Strict quality control system to ensure stable product quality

DSC products are produced according to the strictest delivery quality standards in the industry, combined with a rigorous process management system and strong production management capabilities, resulting in stable product quality and low defect rates

SHENZHEN DASHICHENG OPTICAL CO., LTD  
101, 201 and 301, Unit 3, Building 1, Wanjiang Industrial Park, No.1450, Guangyuan Road, Jutong Community, Fucheng Sub-district, Longhua District, Shenzhen, Guangdong, China

**PROCESS CORE**

**High-tech Water-locking Technology**

The new water-locking technology avoids the discomfort caused by water evaporation to ensure all-weather comfort and hydration. At the same time, it maintains a low water content of 38% and does not compete with the eyes to reduce the burden on the eyes. It is not easy to dry the eyes after long-term wearing.

**Sandwich Wrapping Process**

The colorant is firmly wrapped in the middle of the lens, and the pigment will neither directly contact the eyeball nor fade easily.

**Polymer materials**

High-quality polymer materials allow gas molecules, ions, and water molecules to pass through the lens relatively freely, eliminating the need for oxygen permeability to be limited by water content and reducing discomfort from prolonged wear. It also effectively reduces protein precipitation, is not easily adsorbed by impurities, and can maintain clear vision even with extended use.

**Dyeing technology patent**

The dyeing technology patent of the Sino-Korean joint venture factory enables the three-dimensional combination of reactive dye molecules, resulting in more vivid and realistic colors. Meanwhile, the circular radioactive pattern makes the eyes shine brighter. Diversified size designs can meet different pattern production and customer model requirements.

**Aspheric design**

8.0-8.5mm base curve, suitable for most people's eyeballs. The image is corrected, and problems such as distortion of the field of view are solved. At the same time, the lens is lighter, thinner, and flatter, and it is not easy to slip when wearing it.

**Corner tear cycle design**

The curved edge and edge warping technology design can fully circulate the tears of the eyeballs, and bid farewell to dry and swollen eyes.

**CORNER TEAR CYCLE DESIGN**

The basic design concept of color contact lenses is to achieve the purpose of safety, comfort and vision enhancement. If the lens material has a great influence on the physiology of the human eyes, the design is particularly important to minimize the adverse reactions of lens wearing.

The edge of the Dashicheng lens adopts a unique tear circulation technology, so that the lens is completely suspended on the tear film, which is more conducive to tear circulation, increases ambient respiration, and greatly reduces the pressure on the cornea, commercial angle, and lens. The effect is more in line with the physiological structure of orientated eyes, and it can care for the eyes in every detail.

**ADVANCED PRODUCTION EQUIPMENT AND HIGH-END R&D TECHNOLOGY**

**CLEAN ROOM**

Class 100,000 and class 10,000 clean rooms work on the same time.

**100% FULL LENS INSPECTION**

After the computer 100% inspection, the lens works will manually inspect the lens again.

**INJECTION MOLDING**

Each piece of color contact lens is molded by one-time die-casting of polymer raw materials.

**COLORATION PROCESS**

Produce upto 7 color patterns, and 6,000 pieces each equipment per day.

Powerful

**FDA'S ADVANTAGES**

The products that apply for approval need to monitor 143 critical test points after the product is used by the human body; for a continuous monitoring of 20,000 to 30,000 people for 3 to 7 years, all products that pass the test are granted FDA certification.

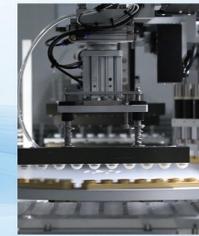

Therefore, FDA certification is recognized by the World Health Organization as the highest safety standard.

Medical devices and other products that have passed the U.S. FDA certification are globally recognized as the safest and most reputable. This not only ensures product quality but also means higher gross profit margins.

MIITEMO Lensweels OILENKA AVIENLANS

More .....

**CUSTOMIZED SERVICE  
OEM & ODM**

**Powerful**

With the world's leading third-generation contact lens production technology, the total production capacity ranks among the top three in the world

**Strong Partnership**

Long-term in-depth cooperation with international famous brands

**Excellent Service Quality**

Flexible and comprehensive service methods, providing high-quality customized services throughout the chain

**CORE COMPETITIVENESS**

**Flexible production line**

According to different types of customers, the average shipping cycle is within 30 days, which is better than the industry average shipping cycle of 15 days.

**Continuous update of new products**

The design ability is the industry leader, big data hot style prediction, and regular update of hot style patterns.

**high productivity**

The digitization and standardization of the "whole chain" can increase the speed by 20%-30% higher than the industry level.

**Rich product styles**

The research and development progress of core materials is leading, and the quality of the third generation is equivalent to or higher than that of the international third generation.

**Rich product styles**

There are about 4,000 series of optional product styles, 15,000 designs and colors, and about 550 SPA in stock.

**Leading in raw material molds**

Using molds from South Korea, the production technology of Korean molds is 10 years ahead of China. The quality of the mold will affect the quality of the product, accounting for 40%.

**Excellence in management**

Build a standard 100,000 clean production plant and introduce advanced production equipment. In production, pay attention to details, grasp the process, use 6S management, visual management, standardized operation, continuous improvement, maintain a good working environment, work flow, and management system to help the efficient operation of the production workshop. Establish a complete production quality management system, adhere to the operation of the dual quality management system of medical device production quality management standards and ISO13485. Turn the post-inspection into pre-prevention, so as to take the initiative in quality management and promote the continuous improvement of product quality.

**MIITEMO**

**FDA'S ADVANTAGES**
