

MILITARY UNIFORM

DEEKON

ABOUT US

Deekon Group manufacture top quality military uniforms, we have customers from European countries (Poland & Serbia) and South American countries (Peru & Chile). Our factory manufactures more than 2 million sets uniforms every year. Including ACU, BDU, M65 JACKET, FROG SUIT, FLIGHT JACKET, PULLOVER, RAINWEAR, and other clothing. The big production capacity makes sure we always deliver the uniforms on time. In the meanwhile, we could provide very competitive price because of refined production management.

We have 550 machines, 600 workers. Every year we can produce 2,000,000 sets clothes. From the material to the production process, every step is under our strict control. This ensures our high quality and lead time. Working with a team of highly creative designers and having access to modern manufacturing equipment and facilities, we are at a favorable position to offer customers all-inclusive OEM service and customized goods.

DK-MU-001 DESERT ACU

ACU is known as Army Combat Uniform or Airman Combat Uniform, it combines with different Camouflage Patterns and Colors, making soldiers available to blend into the landform on the battlefield to avoid being discovered by the enemy, protecting soldiers from casualties.

★ DETAILS

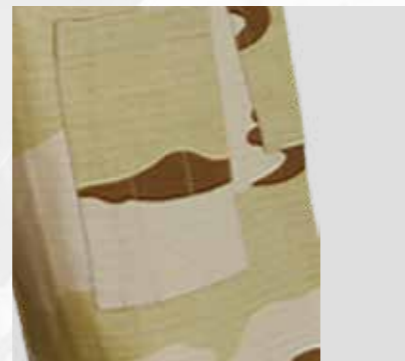

»The slanted chest pocket can easily put your hands in

»Shoulder pockets contains large space to put things in, using Velcro loop to attach logo outside.

»Using hook and loop to adjust cuff.

»Pen pocket can put pen and knife.

»Belt loops stabilize the belt.

»Cargo pockets with elastic tape inside can put tools in without shaking. Pockets closed by flap with Velcro system.

»Knee pad can be inserted into knee pad pouches to protect soldiers' knees.

»Calf storage pocket with Velcro closure.

DEEKON

DK-MU-056 WOODLAND M65

The jacket was introduced into U.S. military service in 1965 to replace the M-1951 field jacket which was an improvement on the M-1943 field jacket of World War II design. It has a built-in hood that can be rolled up and fits into a pouch on the back of the neck as opposed to the separate hood that attached to the M-1951.

The jacket is a lined hip length design, having a bi-swing back; a fly front closure secured by a zip and snap fasteners. It has two piece set-in sleeves (with adjustable cuffs and hand shield extension) and a convertible stand-up collar. The collar has an adjustable tab closure, secured with loop fastener tape and a horizontal zip fastener closure on the under-collar, which acts as the exit for the built-in hood. The built-in hood has a single draw-cord adjustment, and, when not in use, is concealed between the jacket outer shell and fabric liner.

The jacket has two bellows type breast pockets and two lower inside hanging pockets all with flap closures secured by snap fasteners. The specification (revision K) requires pieces of loop fastener tape in the following positions for insignia: at top of each sleeve for placement of patches; on the right and left sides of the chest directly above the breast pockets for name-tape and U.S. Army tape and a piece of loop fastener tape for the rank centred between the second and third snap fastener on front flap. There are also pieces of fastener tape on the collar tab, under-collar, sleeve tabs and outside of underarm.

On the inside of the jacket there are buttons for attaching the insulating liner in cold weather. It has open underarms, buttonholes at the neck and front edges, and button-hole tabs at the sleeve bottoms for attaching the liner to the jacket. The liner is quilted and made of polyester batting covered with 3 plies of ripstop nylon cloth.

The combat shirt closely resembles the Marine Corps Combat Utility Uniform, but the portion covered by the Marine's body armor (such as the Outer Tactical Vest or Modular Tactical Vest) is not as highly reinforced due to the protective qualities of the vest, and to prevent discomfort. There are pockets only on the upper sleeve.

The combat trousers also closely resemble the utility uniform, but there is an additional calf-pocket to help distinguish it from non-FROG trousers. The gloves are designed to be highly durable.

DEEKON

DK-TS-010 LONG SLEEVE SHIRT

A shirt is a cloth garment for the upper body (from the neck to the waist).

Originally an undergarment worn exclusively by men, it has become, in American English, a catch-all term for a broad variety of upper-body garments and undergarments. In British English, a shirt is more specifically a garment with a collar, sleeves with cuffs, and a full vertical opening with buttons or snaps. A shirt can also be worn with a necktie under the shirt collar.

DK-TS-021 POLO SHIRT

A polo shirt is a form of shirt with a collar, a placket neckline with typically two or three buttons, and an optional pocket. Polo shirts are usually short sleeved. Polo shirts are usually made of knitted cotton, usually a Piqué knit, or less commonly an interlock knit, or using other fibers such as silk, merino wool, synthetic fibers, or blends of natural and synthetic fibers, which made polo shirt to be durable and and up to any challenge.

DEEKON

DK-MTS-005 T-SHIRT

The T-shirt evolved from undergarments used in the 19th century and, in the mid-20th century, transitioned from undergarment to general-use casual clothing.

T-shirt is a style of fabric shirt named after the T shape of its body and sleeves. Traditionally it has short sleeves and a round neckline, known as a crew neck, which lacks a collar. A V-neck T-shirt has a V-shaped neckline, as opposed to the round neckline of the more common crew neck shirt (also called a U-neck).

T-shirts are generally made of a stretchy, light and inexpensive fabric and are easy to clean. Typically made of cotton textile in a stockinette or jersey knit, it has a distinctively pliable texture compared to shirts made of woven cloth.

DK-MP-019 SWEATER

A sweater, also called a jumper or pullover, is a piece of clothing, typically with long sleeves, made of knitted or crocheted material that covers the upper part of the body. When sleeveless, the garment is often called a slipover. Sweaters were traditionally made from wool but can now be made of cotton, synthetic fibers, or any combination of these.

Military commando sweater is a favorite among police officers, paramedics, and security professionals. Featuring a durable material construction, this kind sweater will not only keep you warm while you're on the job but will last you a long time no matter how tough things get on duty.

DK-MJ-001 FLIGHT JACKET

A flight jacket is a casual jacket that was originally created for pilots and eventually became part of popular culture and apparel.

Today, flight jackets are usually associated with the MA-1, a now-obsolete U.S. military jacket, which is mostly found in sage green. It is made with flight silk nylon and usually has a blaze orange lining, with the specification tag in the pocket, though earlier models had a sage-green lining and the specification tag on the neck area. It has two slanted flap pockets on the front, two inner pockets, and a zipped pocket with pen holders on the left sleeve. The lighter weight version of the MA-1 is known as the L-2B flight jacket, which in turn, replaced both the original L2 and L2A jackets, which all three differentiate from the MA-1 as they have snap-down epaulets and no inside pockets.

DK-MCU-009 FULL DRESS UNIFORM

Full dress uniform or parade dress uniform is the most formal type of uniforms used by military, police, fire and other public uniformed services for official parades, ceremonies, and receptions, including private ones such as marriages and funerals. Full dress uniforms typically include full-size orders and medals insignia. Design may depend on regiment or service branch, e.g. army, navy, air force, marines, etc.

DK-MR-001 RAINWEAR

A rainwear or slicker is a waterproof or water-resistant coat worn to protect the body from rain. The term rain jacket is sometimes used to refer to raincoats that are waist length. A rain jacket may be combined with a pair of rain pants to make a rain suit. Modern raincoats are often constructed of breathable, waterproof fabrics such as Gore-Tex or Tyvek. These fabrics allow some air to pass through, allowing the garment to 'breathe' so that sweat vapour can escape.

DK-MC-001 COVERALLS

A boilersuit (or boiler suit), also known as coveralls, is a loose fitting garment covering the whole body except for the head, hands and feet.

Coveralls are most often worn as protective clothing over "street" clothes at work. They can be used for painting and decorating, mechanical work, farming, factory work, and other activities where clothes may become soiled. Many companies provide workers with corporate branded boilersuits for identification and marketing.

★ SPECIFICATIONS

- > MATERIAL:
POLYESTER 65% / COTTON 35%
- > WEIGHT:
200GSM
- > WEAVING TYPE:
Twill
- > COLOR:
NAVY BLUE

A boilersuit is a one-piece garment with full-length sleeves and legs like a jumpsuit, but usually less tight-fitting. Its main feature is that it has no gap between jacket and trousers or between lapels, and no loose jacket tails.

It often has a long thin pocket down the outside of the right thigh to hold long tools. It usually has a front fastening extending the whole length of the front of the body up to the throat, with no lapels. It may be fastened with buttons, a zip, velcro, or snap fasteners. Boilersuits with an attached hood are available.
