Sliding door can be mounted on the left or right

Feeding slot or rotating trough

The choice is yours!

The fronts and partitions of the Verden and Hamburg models can be ordered in different lengths and the sliding doors can be mounted on the left or right as required. The basic structure of the stall fronts is the fully welded, high-quality frame which can be combined with various elements as required. The modular design also allows flexible integration of feeding equipment such as the rotating trough or feeding slot.
