Silicone cloth label

Silicone is a new technology used in the clothing industry, also known as heat transfer silicone. It can directly transfer monochrome or multi-color silicone flower patterns and silicone trademark logos onto clothing, gloves, shoes, hats and other products using a hot stamping machine, with a thickness of up to 0.1mm-5mm.

Velcro+TPU

Velcro is made of two types of fabrics, hook and loop, and can be disassembled for use. It is personalized and practical, and can replace buttons or zippers.

HEAT TRANSFER TPU PATCH

TPU has been widely used in the market and daily life because of its similar touch and durability.

01

Selected Material

TPU material is currently a relatively novel material in China. It is environmentally friendly and pollution-free, with good recyclability, and has excellent high tension, high-tensile strength, strong toughness, and aging resistance, making it a mature eco-friendly material.

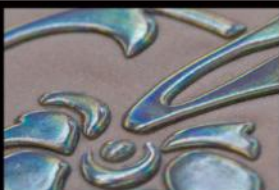

PRODUCT FEATURES

产品特点

Efficient processign

Complete a large amount of processing work in a short period of time, significantly improving production efficiency. For example, in the welding of plastic.

Secure splicing

Ensure that the temperature pressing environment with different fabrics, TPU is firmly and reliably spliced with textile products, and is not easy to fall.

Firm shaping

It can accurately shape the material, making the product shape consistent and standardized. Take fashion clothing and hats for example, it can precisely produce elegant curves outlines.

Energy saving & environment friendly

Compared to some traditional processing ways, TPU is more environmentally friendly by consuming less energy.

02

Why do you choose us?

We are ranked in the top three in the TPU industry, professional in producing uniform badges and shoulder patches, rubber, silicone, leather and reflective labels, embroidery, TPU printing labels, woven and leather printing labels, casing joint and PU puller.
