

FUSION, PROVEN.

THE FIRST IN THE WORLD TO
ACHIEVE NET-POSITIVE FUSION.

FROM BREAKTHROUGH TO REALITY

Hylenr Technologies is the world's first company to achieve reproducible Low Energy Nuclear Fusion (LENR) with a verified Coefficient of Performance (COP) of 1.8. With just 100 watts of electrical input, our reactor produces 180 watts of consistent thermal output — no radiation, no waste, no limits.

UNMATCHED GLOBAL FIRSTS

- Proven Fusion Breakthrough: Functioning LENR reactor with reproducible excess heat.
- First-Ever Transmutation at Scale: Creation of Yttrium, Chromium, Silver, and Platinum.
- Deep-Tech Investor Confidence: USD 3.5 million raised in Pre-Series A funding.

THE OPPORTUNITY

The world's energy system is at a tipping point. Fossil fuels are unsustainable, renewables are intermittent, and fission poses safety and waste risks.

Hylenr bridges these gaps through continuous, clean, and safe base-load power — with the added advantage of rare-earth transmutation. A dual breakthrough unlocking new frontiers in energy independence and material innovation.

WHY INVEST IN HYLENR?

- First-Mover Advantage: Only LENR company with proven reproducible COP > 1 and elemental transmutation.
- Dual Revenue Streams: Clean energy + rare earth production.
- Deep-Tech IP Moat: Proprietary, patent-backed reactor design.
- Massive Market Potential: \$1.5T clean energy + \$30B rare earth markets.
- Visionary Leadership: A global team driving the fusion revolution.

Massive Market Potential

Visionary Leadership

THIS IS HOW HISTORY BEGINS

Hylenr is not just creating energy — it's creating history. By achieving both fusion and transmutation, we're leading the leap from the fossil-fuel age to the Fusion Age.

Join the movement. Invest in a future powered by infinite, clean, and sustainable energy.
