

XXIO 14 Ladies is a lightweight, premium set of Woods and Irons designed specifically for a woman’s swing. Powered by VR-Titanium, the Driver delivers faster ball speeds, more forgiveness, and consistent contact from tee to green. The Irons feature precise tungsten weighting for higher launch, longer carry, straighter shots, and softer landings with ease. XXIO 14 also features the all-new XXIO Blade Putter.

KEY TECHNOLOGIES

NEW VR-TITANIUM

Featured on Drivers, Irons

A world’s first, brand-new titanium alloy that adds silicon to the composition—dramatically increasing design freedom for face and body. Leveraging VR-Titanium enables more overall flex from the face through body, greatly heightening initial ball speed. For the Irons, VR-Titanium allows the toe side of the face to be made significantly thinner, yielding discretionary mass.

NEW ULTiFLEX

Featured on Drivers

This all-new design optimizes the face and body thickness and roundness for increased overall head flex at impact—expanding both the peripheral high-speed zone and the even-faster central zone for higher ball speeds.

NEW ActivWing

Featured on Driver, Fairway Woods, Hybrids

Refined steps on the crown and a new, larger step on the sole improve help harness aerodynamic forces to better stabilize the clubhead during your downswing and guide the club face into optimal strike position, making it easier to hit the sweet spot and improve ball speeds.

NEW High Grip Milled Pattern

Featured on Driver, Fairway Woods, Hybrids

New precision laser milling on the toe and heel delivers optimal gear effect and directional stability—even on off-center strikes or in wet conditions.

NEW CANNON SOLE

Featured on Fairway Woods

A floating weight pad positions the CG for optimal launch and distance. Its unique cannon shape allows us to place mass where needed without impeding each clubface’s flexibility—especially helpful for shots struck low on the face. For XXIO 14, An even larger thick section under the lower face plus a thin sole create a high launch and long carry.

NEW WING CANNON SOLE

Featured on Hybrids

A floating weight pad positions the CG for optimal launch and distance. Its unique cannon shape allows us to place mass where needed without impeding each clubface’s flexibility—especially helpful for shots struck low on the face. For XXIO 14, a larger thin area under the face and larger thick pad toward the face combine for a high launch and long carry.

Edge Cup Face

Featured on Fairway Woods, Hybrids

A stiffened face edge, thinned rear crown, and thinner face generate more flex to increase energy transfer and heighten ball speeds.

Weight Plus

Featured on Drivers, Fairway Woods, Hybrids, Irons

Our proprietary design positions mass in the butt-end of the shaft, under your grip and behind your hands. This counterweight provides an easier takeaway, helps you find the ideal spot at the top of your swing, and makes it easier to release into the downswing for more consistent contact.

NEW Cavity Structure

Featured on Irons

Extra weight eliminated by a hollowed-out heel side of the body and a thinner neck creates a lower and more centered CG.

Iron-Specific REBOUND FRAME

Featured on Irons

An “L-groove” at the lower body reduces stiffness under the face to amplify flex and increase ball speeds. For XXIO 14, the L-groove is positioned lower than the previous Iron model for greater flexibility.

Lower CG Body design with Tungsten

Featured on Irons

The body uses soft stainless steel for a softer impact feel and the ability to adjust loft/lie.

NEW High-Density Face Insert

Featured on Putters

A High-Density Face Insert moves the CG forward to reduce directional variance when struck off-center.
